convai

AI expert for physical work

An expert by the side of every worker who assembles, maintains and repairs your machines.

More productivity · Greater efficiency · Faster results

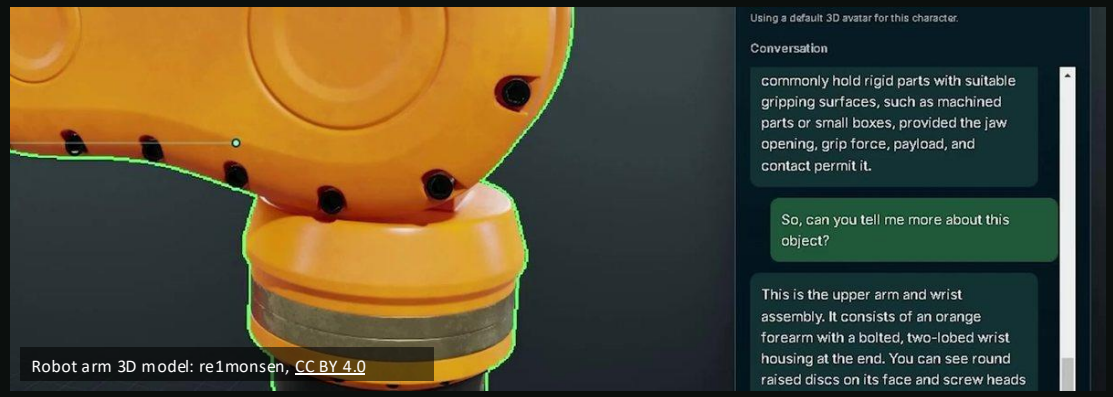

October 2026

WHAT IS CONVAI FOR TRAINING AND REAL-TIME ASSISTANCE?

Your CAD and documents turned into an AI expert for every frontline worker

You can’t hire, train or staff enough experts, and machines keep getting more complex. When a worker gets stuck, the job waits for an expert. Convai delivers the right knowledge and guidance to the right person at the right time.

Learn it in the digital twin

VIRTUAL WORLD · CONVAI ASSEMBLY STUDIO

Your CAD model, made interactive. Ask how anything works, watch it come apart step by step, and follow guided lessons.

Do it on the floor, with AI assistance

REAL WORLD · REAL-TIME VISION ASSISTANCE

On a phone, tablet or headset, the AI sees what the worker sees and guides them through each step.

One AI expert behind both, from the first day of training to every day on the job.

HOW DOES IT WORK IN THE ENTERPRISE?

Built from what you already have. Runs where your data lives.

Convai uses the AI models you approve and can run fully on-prem, even air-gapped.

STEP 1

We take your content

CAD models, manuals, procedures and videos. We plug into the systems you already use.

STEP 2

Convai learns your machines

It maps every part and drafts guided lessons and procedures for your experts to approve.

STEP 3

Your people put it to work

Trainees learn in Assembly Studio, and workers get real-time vision assistance on phones, tablets and headsets.

DEPLOYMENT AND SECURITY

- Your cloud or Convai Cloud
- AWS and Azure Marketplace
- SSO in your environment
- Under an enterprise license, your data isn't used to train Convai models

SOC 2 Type II

ISO/IEC 27001

WHAT SETS CONVAI APART FROM COMPETITORS?

Understands your machine in 3D, not just your documents

Finding a part is easy. Understanding how a machine actually comes apart is not. A chatbot can quote your manuals, but Convai works it out from the 3D design, so workers get the benefit of the CAD without ever opening it.

Robot arm 3D model: re1monsen, CC BY 4.0

THE CORE DIFFERENCE

Spatial reasoning on your CAD model

Spatial reasoning is how Convai understands each and every small component of your machine. Built on leading vision-language models (AI that reads images and text together), it answers questions about any part and drafts step-by-step tutorials.

Builds tutorials and processes

From one CAD model, it drafts training lessons and procedures for the floor.

Sees the outside, knows the inside

Connects what the camera sees with the parts inside, from your CAD.

Answers what no one wrote down

Unlike written instructions, it works out the steps for what was asked.

WHERE IS CONVAI DEPLOYED TODAY, AND WHY?

Deployed in aerospace and defense, and semiconductor manufacturing

The common thread: complex machines, sensitive data, and more work than their experts can cover.

DEPLOYED · ON-PREM

Fortune 100 aerospace and defense company

WHAT

Their teams build AI agents on Convai's platform, using internal data and the AI models they approve.

WHY THEY BOUGHT

It had to run on-prem, keeping proprietary data in their network, and spread scarce expert knowledge.

Fortune 500 semiconductor company

WHAT

In the prototype, workers practice maintenance on a 3D model. The AI checks and records each step.

WHY

They need to ramp up manufacturing without relying on experts being available on the floor.

Best fit: aerospace and defense, semiconductors, automotive, and data-center build-out.

WHAT IS THE RETURN?

More productivity, greater efficiency, faster results

THE PROBLEM TODAY

90%

of the time, the same expert is answering the same questions.

A stuck worker calls the expert. The worker waits, the expert switches context, and productivity is lost.

Purnendu Mukherjee, Convai founder and CEO, AES 2026

Faster ramp-up

New hires are guided on the job instead of shadowing senior staff.

Fewer interruptions

The AI answers the routine questions, so experts stay on their own work.

Less downtime

Workers get answers at the machine without waiting for the one person who knows.

Less authoring

Your experts review drafted lessons instead of writing every step, so you can train on more procedures.

NEXT STEP

We first show one procedure on a 3D model like yours, not your CAD. Then your team runs it on its own data, and we track ramp-up, interruptions and downtime.
